A-Series Cleaning and Disinfection Quick Reference Card

The anesthesia system should be cleaned and disinfected before its first use, then in compliance with facility procedures. For step by step instructions, please refer to the Cleaning and Disinfection section of the operator’s manual. Table below lists the allowable cleaning agents, allowable disinfecting agents and provides the autoclaving process for the anesthesia system.

* For equipment with the symbol , all the listed disinfecting agents are available for use. For equipment without the symbol , only the disinfecting agents marked with "*" are available for use.

** All breathing system components are autoclavable except the PAW gauge, flow sensors, O2 sensor, and bellows. Remove those components prior to beginning the autoclave process. Autoclavable components can accommodate a maximum temperature of 134 °C (273 °F).
